Your **Partner** in Commercial Electrical Services

ELECTRICAL SERVICES

MSC Electrical specializes in all aspects of commercial electrician services.

If you are in the process of expanding or relocating, MSC Electrical has you covered. Look no further. We can handle all aspects of the commercial electrician services that you need. Our master electricians can run all your electrical wiring simultaneously including your Ethernet network and phone lines, saving your business a significant amount of time and money.

If you're looking to maintain an existing electrical set-up, MSC Electrical offers a 24/7 emergency repair service. This service focuses on keeping your network and electrical repairs completed and your business up and running.

COMMERCIAL GENERATOR INSTALLATION

Ice, snow, and wind are all common in Michigan and can knock out a business' lights and equipment without any notice.

The best way to avoid closing your doors is to have a commercial generator that automatically powers up if it determines that the regular flow of power has been cut. It can be wired into your existing system or installed at a new building.

MSC Electrical has a team of experts qualified in the installation of commercial generators. We meter your current electrical draw and match your business with an appropriate sized generator, whether you only need emergency power for an hour or if you need a generator that can run for more than a day.

INTERIOR AND EXTERIOR LIGHTING

Whether your current lighting is simply inadequate or is strapping you with high energy costs, MSC Electrical can help.

Lighting is a crucial aspect of any industrial facility. Low lighting can impact the appearance of your business and the productivity and efficiency of your employees. Old lighting may be costing you a lot of time and money. These are both good reasons to upgrade your current lighting. A good lighting system pays for itself.

MSC Electrical offers a nearly maintenance free, energy efficient product line of interior and exterior lighting. Our team will work with you and your utility provider to see if you qualify for energy savings rebates.
