# Your **Partner** in Industrial Electrical Services

## NETWORK CABLING INSTALLATION AND REPAIR

**The installation of communication cabling throughout your facility is a large part of any industrial electrical system.**

More and more industrial facilities are relying on integrated networking. From the offices to the factory floor, the need to connect your machinery to external control systems is mandatory. MSC Electrical professionals can install network wiring, including phone lines, throughout your entire facility. This gives you options when it comes to Internet connectivity. We also handle network wiring repair that is included in our 24/7 emergency repair service. This service focuses on keeping your network and electrical repairs completed and your business up and running.

## INDUSTRIAL GENERATOR INSTALLATION

**Loss or lapses in power can cost your business thousands of dollars, especially if the power isn't restored within a reasonable time.**

Ice, snow, and wind are all common in Michigan and can knock out power - bringing production to a halt. Having an industrial generator on-site can assist with power outages caused by any severe weather that comes your way.

MSC Electrical has a team of experts qualified in the installation of these technologically complex pieces of machinery. Our highly trained and licensed crews have hands-on experience with industrial generators, either installing them into an existing electrical system or integrating it within a new construction.

## INTERIOR AND EXTERIOR LIGHTING

**Whether your current lighting is simply inadequate or is strapping you with high energy costs, MSC Electrical can help.**

Lighting is a crucial aspect of any industrial facility. Low lighting can impact the appearance of your business and the productivity and efficiency of your employees. Old lighting may be costing you a lot of time and money. These are both good reasons to upgrade your current lighting. A good lighting system pays for itself.

MSC Electrical offers a nearly maintenance free, energy efficient product line of interior and exterior lighting. Our team will work with you and your utility provider to see if you qualify for energy savings rebates.
